

9mm Luger

POLYFRANG[®] FRANGIBLE AMMUNITION

- 90 grain Frangible 9mm projectile is lead free and environmentally friendly.
- Velocity of 1,450 fps for superior performance, even in MP5 sub-guns.
- Safe to use in suppressed weapons; no baffle strikes.
- Meets minimum power factors for competitive shooting.

PolyFrang[®] 9mm Luger Frangible Ammunition is for use in training, defense and duty applications. The lead free projectiles are made with Metal Impregnated Polymer (MIP) technology designed to disintegrate upon impact, virtually eliminating ricochets and splashback. PolyFrang[®] maintains lethality while significantly reducing after target collateral damage and over-penetration. Safe for use in live fire shoot houses and with suppressors.

FEATURES AND BENEFITS:

- Lead free projectile and primer are environmentally friendly, reducing cleanup costs
- Reduced ricochet and splashback, allowing for closer engagement within inches of targets
- Reduced damage to steel rifle targets and reduced over-penetration, decreasing range maintenance costs
- Reduced barrel wear and no barrel fouling, reducing armory costs
- Accuracy comparable to standard ammunition, expanding effective range
- No modifications to duty weapons, saving time and expense

FRANGIBILITY:

- Steel plate – projectiles disintegrate on impact at any angle, no spall from target
- No jacket or plating – no shrapnel created
- Rapid energy transfer – extreme lethality into soft targets
